DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 18-22 and 24-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 18 recites the limitation "said anode" in line 5. There is insufficient antecedent basis for this limitation in the claim.

Claim 20 recites the limitation "said metal oxide" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 24 recites the limitation "said catholyte" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

Art Unit: 1742

2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
5. Claims 18-21 and 25-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Appleby.

Appleby describes a "photolytic" cell, which comprises a transparent window 32. See col. 5, lines 35-40. The window is disposed between layers 16 and 18 and one of the layers appears to be an "anode conductor layer" because oxygen is produced on one side of the structure. A "light-activated catalyst" is disposed on at least one of the layers. See col. 4, lines 50-65. The reference appears to show a second catalyst, 28, and 60 in figures 3-4. The apparatus appears to provide a cathode to anode connection because the system would be inoperable otherwise.

The reference does not show a "cathode bordering said cathode", however, it would be considered obviously within the skill of the art to provide an additional surrounding cathode as desired to insure a more efficient product production. Figures 3-4 appear to provide a "bordering" electrode structure.

Allowable Subject Matter

6. Claim 22 and 24 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
7. The following is a statement of reasons for the indication of allowable subject matter:
- The references of record do not show or suggest a photolytic cell with a light activated catalyst

Art Unit: 1742

disposed upon an anode conductor layer and a second catalyst disposed on the light activated catalyst, said second catalyst including MnO_2 .

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nozik, Ayers and Murphy et al show photolytic cells.
